Laboratory Testing Results for [REDACTED]

Screening Results from: 02/02/2018
DOB: [REDACTED] 27 yrs, Male, 5'10", 166lbs
Blood Pressure: 128/68, 

Tests for Heart Function

The heart pumps blood throughout the body. The cardiovascular system comprises heart and blood vessels. In spite of the fact that all of the body's blood flows through it, the heart needs to be supplied with life-giving blood by its own set of blood vessels. These blood vessels, called coronary arteries, deliver the oxygen that allows the heart to perform its function.

Your Results	
46 mg/dL Preferred Range <150	TRIGLYCERIDES Triglycerides are a way in which most fat is stored in the body. They can come from fat we eat, or fat which is made in the body from food. High levels of triglycerides in the blood can increase risk for heart disease.
153 mg/dL Preferred Range 125-199	TOTAL CHOLESTEROL Cholesterol is a type of fat found in your blood. It floats around in your blood and can get into the walls of the blood vessels and stay there. If you have too much cholesterol in your bloodstream, the fat cells can collect in the blood vessel walls causing them to become narrower.
50 mg/dL Preferred Range >OR=40	HDL CHOLESTEROL HDL cholesterol is considered the 'good' cholesterol that can help get rid of the bad cholesterol (LDL). The higher the HDL cholesterol level, the lower the overall risk of heart disease.
89 mg/dL calc Preferred Range <130	LDL CHOLESTEROL LDL cholesterol is considered the 'bad' cholesterol. The lower the LDL cholesterol level, the lower the risk of heart disease. If this result is blank, we recommend you follow up with your doctor.

Tests for Kidney Function

The kidneys' main functions are to eliminate metabolic waste products and to maintain balance

Your Results	
! 1.40 mg/dL Preferred Range 0.60-1.35	CREATININE Creatinine is a substance found in muscle. The levels help determine how well your kidneys are working. Your kidneys are responsible for eliminating creatinine from the body when you urinate. When these levels rise, your kidney function may be impaired.

68 mL/min/1.73m² Preferred Range >OR=60	eGFR NON-AFRICAN AMERICAN This is a calculation which shows how well your kidneys are working. If your level is below 60, it is recommended that you follow up with your physician.
79 mL/min/1.73m² Preferred Range >OR=60	eGFR AFRICAN AMERICAN This is a calculation which shows how well your kidneys are working. If your level is below 60, it is recommended that you follow up with your physician.

Tests for Pancreatic Function

The pancreas is an organ that is part of both the digestive and endocrine system (controls hormone levels and helps to regulate the body). The pancreas is located beside the stomach and is made up of two major types of tissues. One produces insulin, which regulates glucose, and the other produces enzymes that aid in the digestion of food.

4.9 % of total Hgb Preferred Range 4.0-5.6	HEMOGLOBIN A1C This test is also called A1c and measures the average blood sugar levels over the past several weeks. It is used to monitor glucose control in diabetics.
---	--

Other Tests

These tests have been ordered by your health plan.

23.8 Preferred Range 18.5-24.9	BODY MASS INDEX (BMI) Body mass index, or BMI, is a measurement of body size based on your height and weight. Normal values are between 18.5 and 24.9.
